

- Remove and clean mosquito breeding areas – pots, buckets, gutters, drains, pool covers, old tyres,
- Install insect screens on your windows
- Install mosquito nets around beds and strollers
- Use effective and safe repellents for anyone over 6 months old:
 - Over 12 years old use 30% DEET
 - For 2-12 years old use 10% DEET three times a day
 - For 6 months to 2 years use 10% DEET once a day
 - For less than 6 months use mosquito netting and long clothing
 - If you have a negative reaction to DEET and are over 3 years use 10-30% Oil of Lemon Eucalyptus or 10-20% Picaridin
- A CO₂ based trap can be effective; however zappers, ultrasonic devices, patches or bands have not been proven to be effective.
